MC-1612-V2b	Dual-frequency multi-constellation GNSS positioning module	1.2

## 1 Introduction

LOCOSYS MC-1612-V2b is a high-performance dual-band GNSS positioning module that is capable of tracking all global civil navigation systems. It adopts 12 nm process and integrates efficient power management architecture to perform low power and high sensitivity. Besides, concurrent reception of L1 and L5 band signals mitigates the multipath delay and achieves more accurate position.

The module supports hybrid ephemeris prediction to achieve faster cold start. One is self-generated ephemeris prediction (called EPOC) that is no need of both network assistance and host CPU's intervention. This is valid for up to 3 days and updates automatically from time to time when GNSS module is powered on and satellites are available. The other is server-generated ephemeris prediction (called EPO) that gets from an internet server. This is valid for up to 14 days. Both ephemeris predictions are stored in the on-board flash memory and perform a cold start time less than 15 seconds.

## 2 Features

8	EN	I	Enable the module, high active. Internal 10K ohm pull-up resistor to 1.8V. Setting this pin to low will disable “hot start” function, i.e. boot from “cold start”. Leave unconnected if not used.	
9	VCC_RF	O	Output voltage for active antenna	
10	GND	P	Ground	
11	RF_IN	I	GNSS RF signal input. The overall gain of the active antenna must be between 16dB ~ 35dB.

13	GND	P	Ground	
14	LNA_EN	O	Output pin to control the external LNA, high active. Internal pull down.

22	V_BCKP	P	Backup battery input. It is recommended to connect a backup supply voltage to V_BCKP in order to enable warm and hot start features. Moreover, V_BCKP is a must of the system running. If no backup power is available, connect V_BCKP to the main power supply (VCC).	3
23	VCC	P	DC supply input. Must be clean and stable.	4
24	GND	P	Ground	

<Note>

1. USB selective suspend function is not supported.
2. Refer to Fig 3-4 and Table 3.1 for the application of controlling an external active antenna and getting its status.
3. In order to get the advantage of hybrid ephemeris prediction, this pin must be always powered during the period of effective ephemeris prediction.
4. If an abnormal input voltage as shown in the figure below is input, even if the correct voltage is input again later, the module may not work until V\_BCKP pin is re-powered.

### 8.2 Recommended land pattern dimensions

Note: The recommended land pattern dimensions are shown for reference only, as actual pad layouts may vary depending on application.

## 9 Reel Packing information

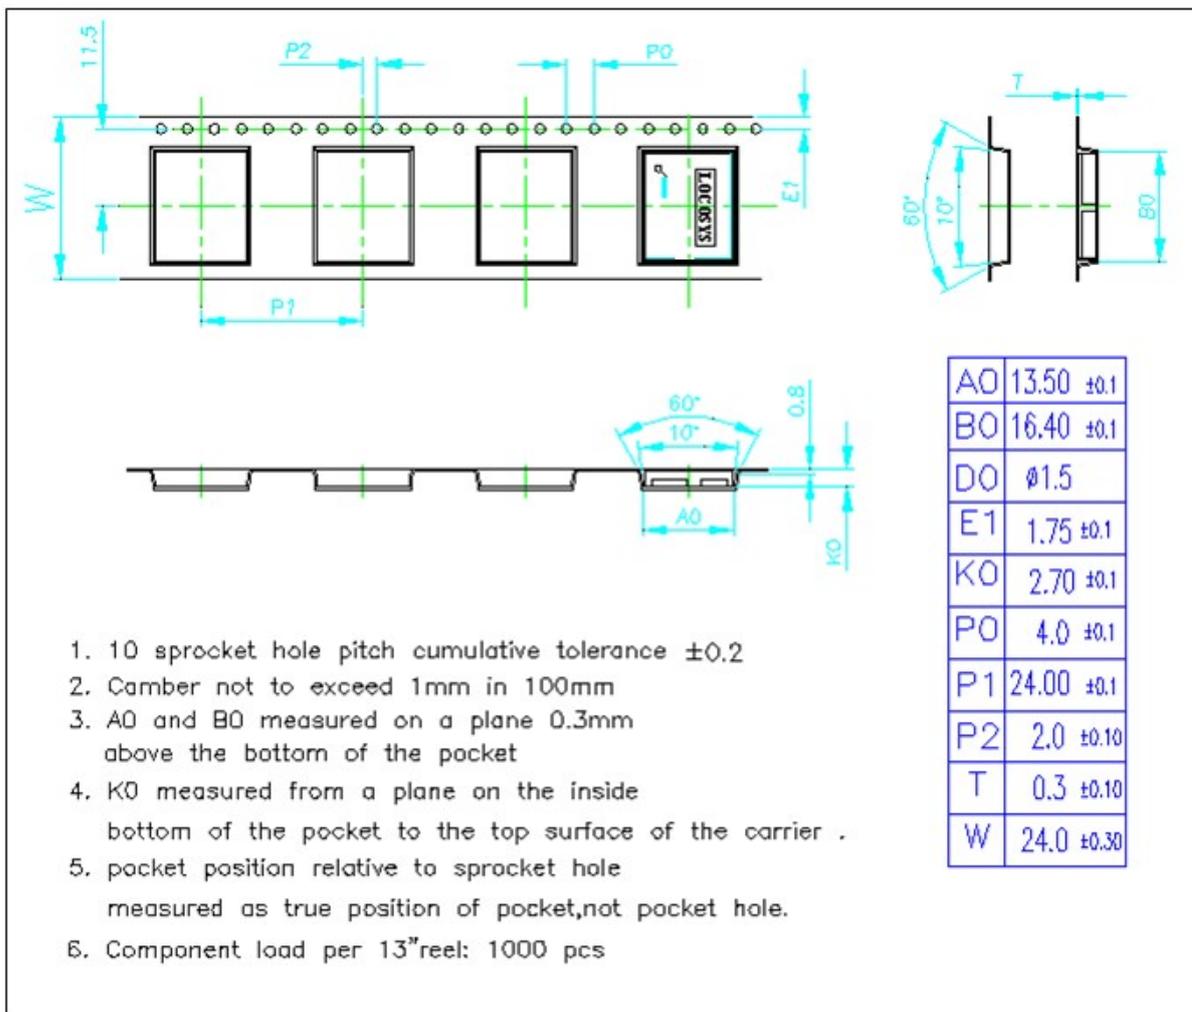

### 9.1 ESD precaution

GNSS modules are electrostatic sensitive devices. Handling the modules without proper ESD protection may result in severe damage to them. ESD protection must be implemented throughout the processing, handling and even when the modules are being returned for repair.

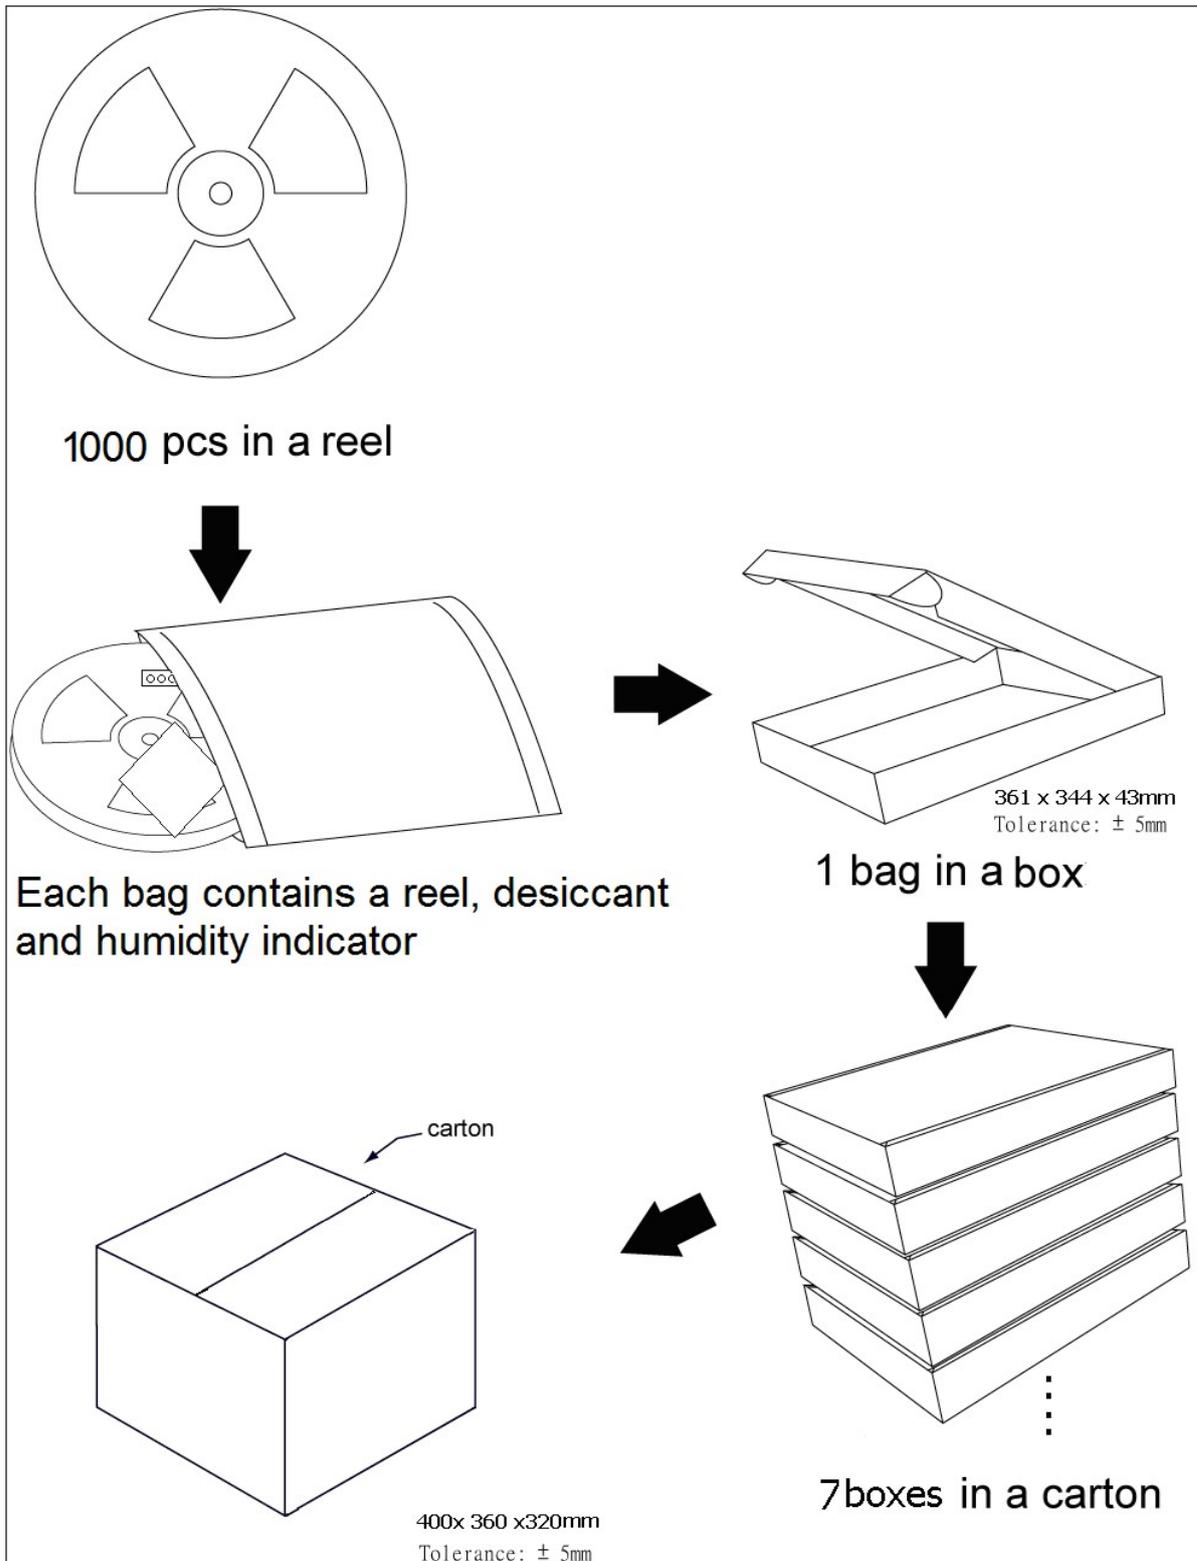

### 9.2 Packaging

The modules are sealed in a moisture barrier ESD bag with the appropriate units of desiccant and a humidity indicator card. It should not be opened until the modules are ready to be soldered onto the application.

#### 9.2.1 Packaging

### 9.2.2 Box packaging

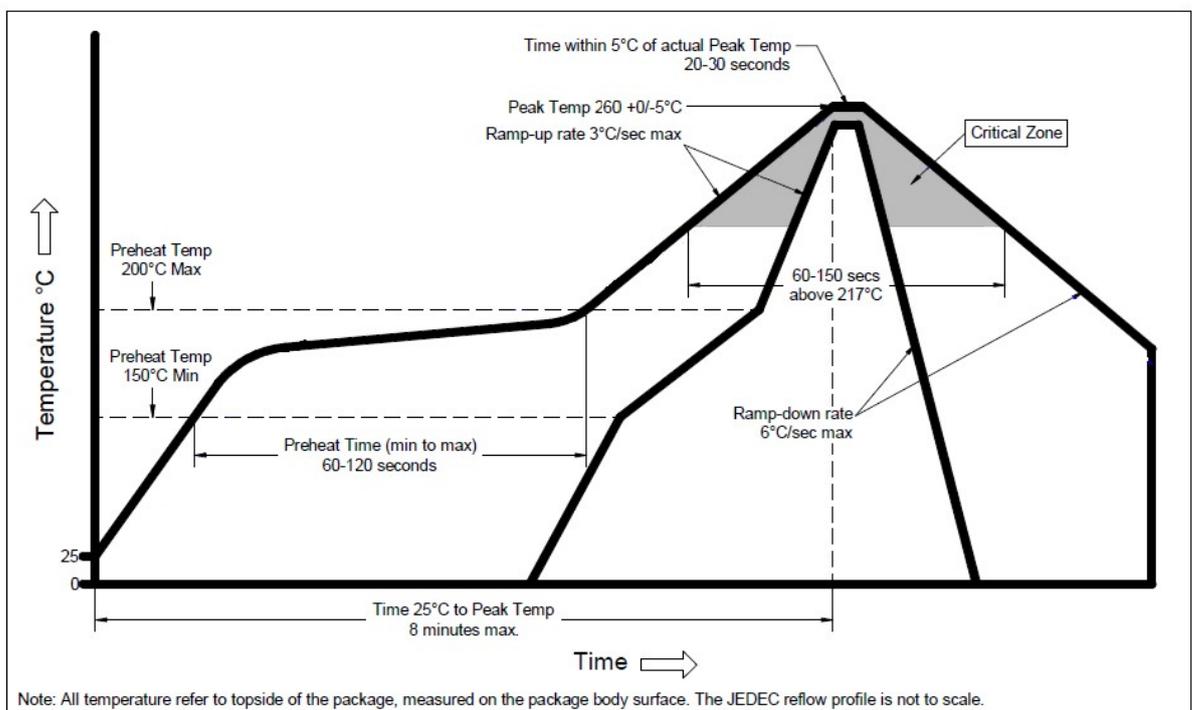

### 9.3 Moisture sensitivity level

The moisture sensitivity level of the module is 3. After the sealed bag is opened, modules should be mounted within 168 hours at factory conditions of  $\leq 30^{\circ}\text{C}$  and 60% RH or stored at  $\leq 20\%$  RH.

The modules require baking before mounting if above conditions are not met. If baking is required, the modules without the tape and reel may be baked for:

- a. 192 hours at  $40^{\circ}\text{C} + 5^{\circ}\text{C} / -0^{\circ}\text{C}$  and  $< 5\%$  RH
- b. 24 hours at  $125^{\circ}\text{C} + 5^{\circ}\text{C} / -0^{\circ}\text{C}$

### 9.4 Reflow soldering

Note the module mounted to the top side (first reflow side) may fall off during reflow soldering of the bottom side.

## 10 Product marking and ordering information

### 10.1 Product marking

The marking of the module is engraved on the metal shielding that has product information, such as LOCOSYS logo, product name and manufacturing date.

### 10.2 Ordering information

Product name	Description	Remark
MC-1612-V2b	Dual-frequency multi-constellation GNSS positioning module	GPS/QZSS: L1 C/A, L5C GLONASS: L1OF GALILEO: E1, E5a BEIDOU: B1I, B2a NavIC: L5
